

# The cheap criterion cannot see mass. The coupled simulation resolves a 4.86x effect over the same range.

d = 0.29443 m, v = 1.5 m/s, standing water, n\_grid = 64. L1a evaluated with vehicle\_params.L1\_verdict (full AR&R rule). AR&R values are that report's DRAFT INTERIM criteria for STATIONARY vehicles. Left and right axes are independent quantities; ranges are matched only for legibility.
