

Drag vs. friction limit
solid = drag, dashed = μN

Critical velocity vs. depth
zero once buoyancy cancels weight

Analytical model, not simulation output. $C_D=1.38$ (Smith, Modra & Felder 2019, 1:18 Yaris flume); $\mu=0.30$ (AR&R adopted, conservative); $m=1100$ kg; prism $4.3 \times 1.7 \times 1.47$ m over 0.75 of footprint.
